

Choose your perfect thermowood facade and bring your dream to life with Thermodecking.

Our facade boards are resistant to decay and deformation, outperforming all other finishing materials available.

Thermowood undergoes deep heat treatment at temperatures up to +205°C, ensuring the material retains its original properties for up to 30 years.

Top-notch performance.

High moisture resistance (up to 95% water absorption by weight), resistance to temperature fluctuations, high compressive strength (up to 300 kg/cm²), and durability against static and dynamic loads.

Safety and environmental compatibility. Our facades are treated with a water-repellent impregnation primer to shield against moisture and fungi, using only natural materials in the thermowood facade plank.

Our commitment to quality is reflected in our state-of-the-art technological equipment, advanced European technologies, and meticulous raw material selection, ensuring 100% stability in all mechanical and consumer properties of the final product.

**In construction and architecture,
heat-treated facade planks stand out
as the most durable option.**

The heat treatment involves increased temperature and pressure, significantly enhancing the material's resistance to corrosion. Opting for facades made of heat-treated boards guarantees the utmost reliability in building facade cladding.

Thermowood has become the **leading** choice for finishing **materials**, adorning the **facades of cottages, country houses**, and various **administrative** and **commercial buildings**.

Our thermowood facade cladding represents a new generation of materials, catering to the most refined tastes and requirements in design.

Advantages of our thermowood facade cladding include:

- superior processing quality;
- environmental purity and absence of pungent odour;
- easy processing;
- extended service life (up to 30 years warranty).

We offer an extensive range of colour palettes and shades, providing diverse options to suit your preferences.

Our company uses only natural oils and colour pigments specially developed for thermowood. A wide variety of natural shades and colours allows the most daring design project to come to life.

All colours schemes are available

To preserve the original colour of thermowood, we recommend coating it with oil.

The oil-based products we use to coat the board are non-toxic and safe.

They emphasise the natural grain of the wood while providing additional protection from sunlight.

The carefully selected pigments meet all necessary requirements for environmental friendliness, high consumer properties, and project stylistics.

Thermodecking
Wood for life.

The broad range of thermowood facade board choices allows for limitless design possibilities.

Over the years, Thermodecking has cultivated a stellar reputation among our valued clients, designers, and architects.

Our customers place their trust in us, a trust reinforced by numerous diplomas and certificates, prestigious titles such as Product of the Year and Golden Brand, and, most importantly, the glowing recommendations from our satisfied customers and esteemed partners.

Equipped with extensive resources, including vast experience, in-house production capabilities, state-of-the-art equipment, and a team of top-notch professionals, we are well-prepared to bring even the most ambitious ideas and projects to life.

Our fundamental commitment is not just to provide a service but to genuinely assist our customers.

At Thermodecking, we adhere to the principle of a judicious balance between cost and quality of services. This approach empowers us to guarantee the resolution of tasks of any complexity promptly.

Thermo-treated facade cladding boasts
**enduring structural integrity,
maintaining stability**
for over 25 years.

Suitable for both indoor and outdoor applications,
thermowood thrives in all climates.

Being impact resistant and environmentally friendly, this building
material retains its aesthetic and protective properties over time.

Thermodecking facade cladding

stands out as a product that enables the realisation of the most unique design solutions.

Backed by years of expertise in wood heat treatment, our company proudly offers a product aligning with international quality standards.

Our proprietary production technology and meticulous raw material selection ensure 100% stability in all mechanical and consumer properties.

Patented heat treatment technology enables the creation of materials with unparalleled technical and operational indicators.

The exceptional quality of our products is a testament to our advanced technological equipment and the incorporation of cutting-edge European technologies.

What sets us apart:

- we are manufacturers, allowing us to produce any size for your project;
- we assist in selecting colours, board profiles, provide visualizations, and offer installation support if necessary;
- all of materials are guaranteed for more than 10 years.

We work in close collaboration with leading architects and construction companies.

Comprehensive assistance from selection to realization:

- fulfilling orders of any complexity;
- crafting design for various materials;
- assisting in equipment selection and installation;
- providing a guarantee for the work completed;
- operating with transparency and honesty;
- aiding in cost estimation for projects at an optimal price.
